

# MRI Report

Name: Sofia Martinez

Age: 28

Gender: Female

Date: 2023-10-05

Patient ID: SM-0901

## Findings:

The MRI images reveal a high level of detail in both the grey and white matter of the brain. However, there appears to be a small, non-enhancing lesion in the frontal lobe.

## Diagnosis:

The observed lesion is likely benign, but given its location, further assessment is recommended. The patient is advised to undergo a follow-up scan and consult a neurologist for a detailed evaluation.
