

Endoscopy Report

Name: Michael Brown

Age: 54

Gender: Male

Date: 2023-10-06

Patient ID: MB-0807

Findings:

The endoscopic examination revealed an inflamed esophagus and multiple gastric ulcers. No polyps or abnormal growths were noted in the stomach or duodenum.

Diagnosis:

The inflamed esophagus and gastric ulcers suggest a severe case of gastroesophageal reflux disease (GERD) and peptic ulcer disease. The patient should consult a gastroenterologist for a treatment plan, which may include antacids and lifestyle changes.
