

PET Scan Report

Name: Sofia Martinez

Age: 28

Gender: Female

Date: 2023-10-05

Patient ID: SM-0901

Findings:

The PET images show normal metabolic activity in most organs. However, there is an increased uptake in the thyroid gland.

Diagnosis:

The increased uptake in the thyroid gland may suggest a hyperactive thyroid condition. The patient should consult an endocrinologist for further evaluation and possible treatment.
